

Thank you so much for your order. Your GreenGuard Grazing Muzzle is being posted today and you should receive an email with tracking information any moment (sent via Australia Post).

PLEASE NOTE:

the grazing muzzle will not prevent founder or laminitic episodes from happening. The muzzle is designed to reduce grass intake.

- The Greenguard grazing muzzle is not recommended for use when the grass is shorter than 2 inches in length.
- All grazing muzzles can potentially wear on your horse / pony teeth – we recommend checking teeth weekly and ensuring your grazing muzzle is still fitted correctly, clear from feed or sand / dirt build up. It is a good idea to clean your grazing muzzle once a week.
- Ensure your horses water option is wide enough to fit the muzzle in.

Please find below our recommended fitting guide and fitting tips:

1. Ensure the GreenGuard logo is facing forward with 3 slots running across the front of the horse / pony nose.
2. Attach all 4 straps to your halter – 1 on the noseband, 2 on either side and 1 at the rear. Ensure the buckles are on the outside section of the strap.
3. Adjust the straps so that the muzzle sits parallel to the horse / pony grazing area. The muzzle should sit approximately 1 inch away from the horse / pony mouth. Ensure the muzzle is not fitted up against the horse / pony teeth. This is important as you don't want it sitting too low where there is a lot of movement of the muzzle and you don't want it too tight where it sitting against the mouth.
4. Watch your horse / pony for 10 minutes and in this time you should see the horse / pony moving and learning how to graze with the muzzle.

Fitting tips

Whilst using our grazing muzzle, we have made a few minor adjustments to ensure comfort and safety for our horse / pony.

1. Once the muzzle has been fitted correctly and you are happy with positioning of the straps, we used a cohesive wrap (or duct tape or anything similar) to tape each strap together.
2. We found that the noseband strap has the potential to move around so we used cohesive wrap to tape it in place in the middle of the halter. Generally not needed if fitted with a GreenGuard Breakaway Halter.

Should you require any further information on any of our products, please do not hesitate to contact us via email or telephone.
